Turquoise (S) Strands

We have recently ordered turquoise advertised as "natural" from some, but not all of the major turquoise suppliers in the USA. Our testing has shown, without exception, that this material is coated or stabilized. Fire Mountain would not designate any of these materials as "natural", so we are listing all as stabilized (S). The three treatments currently applied to turquoise are paraffin polish, polyresin polish or stabilization.

The paraffin or polyresin polish will possibly darken or add a surface waxiness. The stabilizing process will increase the material's durability and hardness, and can darken the color of turquoise

Sold per 16" strand, temporarily strung
